

Abstract Of The Disclosure

A method to resolve the stereoisomers of an optically active compound comprising an amine moiety. The method provides a mixture comprising two stereoisomers of a compound comprising a amine moiety. The method supplies *l*-fenchyloxyacetic acid, treats the mixture of
5 stereoisomers with that *l*-fenchyloxyacetic acid, and collects one of those two stereoisomers having greater than a 99 percent enantiomeric excess.
